

Product Familiarisation/Training

www.asl-training.co.uk

ASL provides the additional skills needed in 21st Century LAN/WAN environments. We provide expertise and tools that compliment your existing staff and which keeps your mission critical environment running smoothly towards the rigorous requirements of eCommerce.

Our training courses are aimed at equipping you with the necessary skills to get the most out of your product investment. All the courses are on site using your real environment.

Our training is unique. We do not hold public classes where the same courseware is presented to everyone. Our classes are part of a consultative process where we spend a couple of days doing a simple discovery of your network and needs, and then modify the presentation to include the specifics of your exact environment.

Key Benefits:

- The material is more applicable and far easier to absorb when it revolves around the network you actually support
- Certification track information is fully covered
- Unique courses not typically offered elsewhere
- All instructors are active consultants so information is 'real world' as well as test specific
- All instructors certified as Engineers and Instructors in any discipline they teach

Courses Include:

- Network Analysis
- Network Monitoring
- Network Troubleshooting
- Network Baselining

Product courses include:

- Scrutinizer
- WhatsUp Gold
- SNMPC
- Websense
